Best Practices

Graphic conventions for the construction of the wiki :

Todo

If something is missing during the writing process, leave a #TODO to remember.

Fonts / titles

- keep the standard fonts
- start the pages with a level 6 title (6 x =)

⚠️ When you change the titles, you can break links that specifically point to it!

Screenshot

capture tool

Prefer the capture tool LightShot which allows, in addition to an easy selection, to add frames, arrows, annotation.

Link to click

When you insert a screenshot, by default it is clickable: clicking on it opens a page with only this image. You must add `nolink` to kill the link.

examples :

```
{{:images:vigilens_designer.png?50}}
```

picture size

Limit the max size 650 wide.

Interface button

When quoting a button or something visible on the user interface, use the following syntax:

Click on the button `My Button`.

```
Click on the button ''My Button''.
```

Browser

Favour Chrome. Indeed, the installed plugin ImgPaste allows us to directly "paste" an image from the buffer. Hyper efficient used in combination with LightShot.
