

Home Menu > Vigilens

The parameters entered at this level are common to all the machines on which the Vigilens application is installed (including Vigilens Web). It is stored in the “Vigilens.EVIDENS-Parameter” file located in the root of the shared directory.

It is possible to return to the default setting by deleting the “Vigilens.EVIDENS-Parameter” file present at the root of the shared directory.

Global

- Automatic refresh of the query tree : Allows you to delete/enable the automatic update of the list of queries (user and shared) displayed in the Vigilens Designer application. If the update is activated, it is possible to specify the refresh frequency.
- Automatic update for shared datasources: If this option is activated, all shared data sources are systematically re-imported when the Vigilens Designer application is launched.
NB: Except in special cases, it is preferable not to activate this option.
- Check physical printer margins before printing: During a “Print” output, displays a warning message if some elements to be displayed are located outside the printable area.
- Open each MS-Excel file in a new window : During a “Excel File” output, displays the generated file in a new Excel instance rather than using an existing instance (which can be a problem if the existing instance is in use).
