Home Menu > Vigilens

The parameters entered at this level are common to all the machines on which the Vigilens application is installed (including Vigilens Web). It is stored in the "Vigilens.EVIDENS-Parameter" file located in the root of the shared directory.

It is possible to return to the default setting by deleting the "Vigilens.EVIDENS-Parameter" file present at the root of the shared directory.

Global

Vigilens application setup
Global Format Advanced parameters Statistics Web
Automatic refresh of the query tree
Refresh each 2 😴 second
Automatic update for shared datasources
Check physical printer margin before printing
Open each MS Excel file in a new window
Email Setup
OK Cancel

- Automatic refresh of the query tree : Allows you to delete/enable the automatic update of the list of queries (user and shared) displayed in the Vigilens Designer application. If the update is activated, it is possible to specify the refresh frequency.
- Automatic update for shared datasources: If this option is activated, all shared data sources are systematically re-imported when the Vigilens Designer application is launched.
 NB: Except in special cases, it is preferable not to activate this option.
- Check physical printer margins before printing: During a "Print" output, displays a warning message if some elements to be displayed are located outside the printable area.
- Open each MS-Excel file in a new window : During a "Excel File" output, displays the generated file in a new Excel instance rather than using an existing instance (which can be a problem if the existing instance is in use).

Mail setup

Last update: 2020/09/03 en:v8_0_0:admintool:menus:accueil:vigilens:start https://vigilens.wiki/dokuwiki/doku.php?id=en:v8_0_0:admintool:menus:accueil:vigilens:start&rev=1599126773 11:52

Default encryption	
Encryption	
○ None	
Sender	
Sender address support@vigilens.fr	
Copy for sender	
OK Cancel	

Smtp server setting that will be used for "Send mail" outputs as well as the sender appearing in the mail.

NB: This default setting can be redefined at the level of each group, each user and even in each query (at the level of the output setting).

Format

Vigilens application setup
Global Format Advanced parameters Statistics Web
String Xxx Xxxxx X Xxx
Numbers 7777777,777
Dates 31/01/2000
OK Cancel

Allows you to set the default formatting for each type of data. This setting can be redefined at the level of each group, each user and each field of each query.

String

Format	x
Case	
Do not change case	~

Advanced parameters

Vigilens application setup
Global Format Advanced parameters Statistics Web
Maximum buffer size allocated to string fields 20000 characters
Maximum memory size for attachment (JDE datasource 32767 bytes only)
OK Cancel

- Maximum buffer size allocated to string fields: Maximum number of characters that can be displayed for a text field. Characters beyond this number are truncated.
 NB: The higher this value, the higher the response time for data extraction may be.
- Maximum memory size for attachment (JDE datasource only): This option is valid only for JDE data sources. It defines to the maximum memory size (in bytes) used to display "Text" type appendices.

Nb: If this value is too small for the display of a given appendice, the minimum value required is #EPPOR# (Minimum buffer size needed + 1150)

displayed instead of the text of the appendix. #ERROR# (Minimum buffer size needed : 1150)

Statistics

Activating statistics allows you to define a database in which Vigilens will record information about

connections and queries runs.

Vigilens application setup
Global Format Advanced parameters Statistics Web
Database Status : OK
Keep connection to statistics database
Yes (Better response time)
O No (Less concurrent connections)
Events to track
✓ Login / Logout
✓ Query run
OK Cancel

Once the database is defined, Vigilens connects to it and creates two tables (VIGILENS_CONNECT and VIGILENS_EXEC). If everything went well, the status becomes "OK" and it is then possible to choose if you want to stay connected or not and which elements you want to log (connections and/or query run).

Database

Database Access Setup
SQL language used Please enter here the SQL language to be used for this database MS Access database
Data source ODBC data source
Login Login each time you run the application Login with the following account :
OK Cancel

The configuration of the database is similar to that of a database used to make queries (see Setup menu > Application).

WARNING : Once the statistics are activated, it is no longer possible to connect to a Vigilens application if it does not have access to the statistics database. If Vigilens is installed on several machines, it is mandatory to check that the statistics database will be accessible from all machines before activating the statistics. In particular, it is necessary to make sure that the ODBC (or OCI) drivers are installed on all machines.

Web

Vigilens application setup
Global Format Advanced parameters Statistics Web
URL for Vigilens Web server (e.g. http://ServerName:port/vigilens)
http://12.34.567.890/vigilens/
Folder with Monitor files
OK Cancel
