# Management > Set User Menu

This menu is used in conjunction with the **Group Management** window and the **User Management** window. See Admintool. If some buttons are grayed out, it means that a user must be selected in either of the two Management windows.

### **User properties**

When we create or modify a user, we have access to all his properties.

The user settings are similar to those defined at the group level, with a few exceptions.

#### Global

User setup ×	
Global Rights Restrictions   Time Out	Data Access Restrictions   Shared Queries
User	WEB_DEMO_EN
Group	URL_WEB_USERS
✓ Use the type of user defined at group level	
Limit the number of simultaneous logged users	
☐ Dedicated work folder	
✓ Use of the connection type from group level ☐ Enable connection without login (if Windows user matches a Vigilens one)	
	Setup for emailing
OK	Cancel

If you uncheck use the type of user defined at group level, you can choose not only Vigilens viewer/web and Vigilens Designer, but **Vigilens Dedicated** too. This latest profile allows reserving one connexion (license) for this user. This is useful when you want to be sure that a free connexion will be available for this user at run time.

The dedicated working directory is the location where queries that the user can create, modify or delete are stored. If no working directory is specified, the "Archives" subdirectory of the directory where Vigilens was installed is used by default.

Be careful, this us a problem when using Vigilens on several different machines (for example, using Windows TSE with several servers). Indeed, in this case, the user is likely to use several different directories depending on the machine on which he is connected. In this case, it is strongly recommended to specify a working directory for each user.

This directory can be based on environment variables which allows, for example, to use several different directories, depending on the Windows user, for the same Vigilens user.

### **Rights restrictions**

Identical to group rights restrictions, but if a box is checked at group level, you cannot un-check it at user level.

#### Time out

Identical to group time out, but values must be lower than what is defined at group level.

#### **Data restriction**

Identical to group data restrictions. However, if security is defined at group level, you cannot bypass it at user level. A Group Level Restrictions button let you see what is defined at group level.

### **Shared queries**

You can either use the group settings or specify different directories.

# **Change user language**

Allows you to change the languages (of the interface and descriptions from the database) of the selected user.

## Move to another group

Move to another groupe Move the user selected in the panel to the desired group. You can also drag & drop users from one group to another in the panel to achieve the same thing.

### Change user password

There is no restriction on password length/characters used.

# **Change format**

Allows you to specify, for the selected user, formats different from those defined in Vigilens (see Vigilens Setup).
