

Management > Set User Menu

This menu is used in conjunction with the **Group Management** window and the **User Management** window. See [Admintool](#). If some buttons are grayed out, it means that a user must be selected in either of the two Management windows.

User properties

When we create or modify a user, we have access to all his properties.

The user settings are similar to [those defined at the group level](#), with a few exceptions.

Global

The screenshot shows the 'User setup' dialog box with the following details:

- Tab: Global
- User: WEB_DEMO_EN
- Group: URL_WEB_USERS
- Use the type of user defined at group level
- Limit the number of simultaneous logged users (1)
- Dedicated work folder
- Use of the connection type from group level
 - Enable connection without login (if Windows user matches a Vigilens one)
- Setup for emailing... (grayed out)
- Buttons: OK, Cancel

If you uncheck use the type of user defined at group level, you can choose not only Vigilens viewer/web and Vigilens Designer, but **Vigilens Dedicated** too. This latest profile allows reserving one connexion (license) for this user. This is useful when you want to be sure that a free connexion will be available for this user at run time.

The dedicated working directory is the location where queries that the user can create, modify or delete are stored. If no working directory is specified, the "Archives" subdirectory of the directory where Vigilens was installed is used by default.

Be careful, this us a problem when using Vigilens on several different machines (for example, using Windows TSE with several servers). Indeed, in this case, the user is likely to use several different directories depending on the machine on which he is connected. In this case, it is strongly recommended to specify a working directory for each user.

This directory can be based on environment variables which allows, for example, to use several different directories, depending on the Windows user, for the same Vigilens user.

Rights restrictions

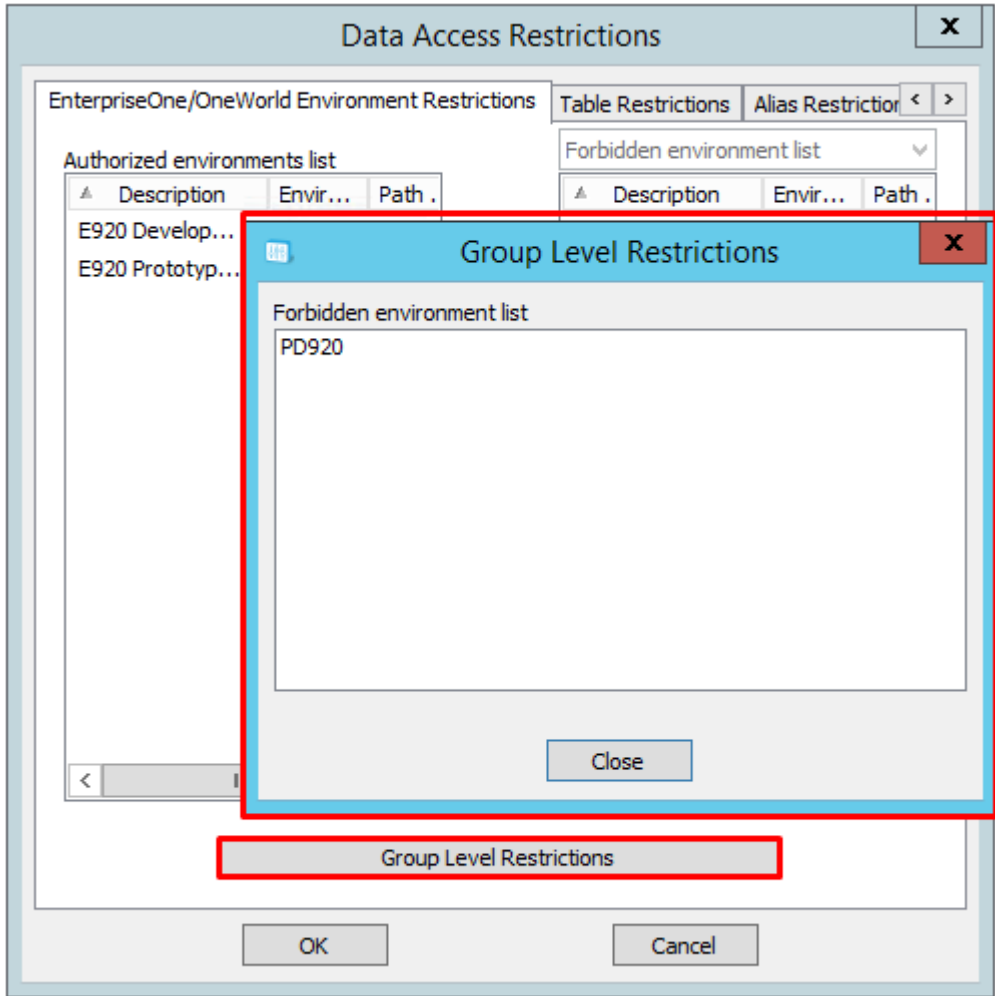

Identical to group rights restrictions, but if a box is checked at group level, you cannot un-check it at user level.

Time out

Identical to group time out, but values must be lower than what is defined at group level.

Data restriction

Identical to group data restrictions. However, if security is defined at group level, you cannot bypass it at user level. A Group Level Restrictions button let you see what is defined at group level.

Shared queries

You can either use the group settings or specify different directories.

Change user language

 Change user language

Allows you to change the languages (of the interface and descriptions from the database) of the selected user.

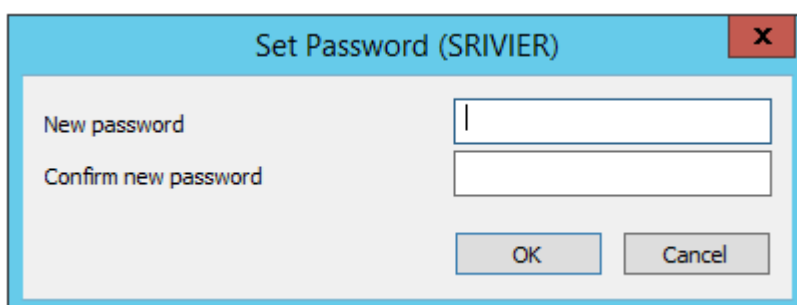

Move to another group

 Move to another groupe Not used much, it is more natural to drag & drop users from one group to another.

Change user password

 Change user password

There is no restriction on password length/characters used.

Change format

ABC
123 Change format

The image shows a screenshot of a software dialog box titled "SRIVIER". The dialog box has a light blue header bar with the title "SRIVIER" and a red close button (X) on the right. Below the header, there is a section labeled "Format" which contains three buttons: "String...", "Number...", and "Date...". At the bottom of the dialog box, there are two buttons: "OK" and "Cancel".
