Parameterization

Database

This screen is the same as [AdminTool](#), except that it has an **Import** button while the [AdminTool](#) has a **Share** button.

The **Import** button lets you to automatically retrieve the definition of a previously shared data source.

When you click on the **Import** button, a dialog box asks which data source must be imported.

. It is possible to import several data sources at the same time.

In order to take advantage of the specific functionalities of JDE data sources, it is imperative that the data source be imported (even if it already exists on the machine). An imported data source can be recognized by the name of the ODBC driver that appears in the list of databases. For an imported source, the driver name must be “< Direct access via OCI > (Shared)” for an Oracle type database or “Vigilens - Shared DataSource” for a connection via ODBC.

Help Box

Identical to [AdminTool](#)

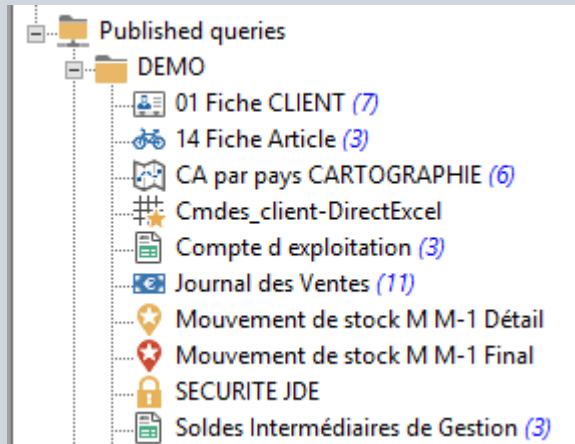

Global

The options in this screen allow to optimize the response times for machines with access to queries with a high latency.

- Use a generic icon to display queries : Replace any specific icons associated with the queries by a generic icon to reduce response times.
- Do not display the number of result files in the query tree : Allows a faster display of the list of queries.

The number of result files is the blue number in brackets in the [query panel](#)

Color

Vigilens uses different colors in order to quickly identify joints and interlocking brackets. It is possible, in this screen, to modify the number of colors used, the order of the colors as well as the colors themselves.

Set User

Identical to the screen present in the application [AdminTool](#), with in addition the possibility to specify, for the connected user, formats different from those defined in Vigilens (see [Vigilens Settings](#)).

Information panel

This is where you can customize the panel [Overview](#).

The screenshot displays the 'Vigilens Designer' application window. The title bar includes 'Vigilens Designer' and 'Outils des requêtes'. The menu bar contains 'VIGILENS DESIGNER', 'Accueil', 'Personnalisation', and 'Requête'. The ribbon interface is divided into four sections: 'Execution' (with 'Executer' and 'Imprimer'), 'Edition' (with 'Ouvrir', 'Historique', 'Renommer', and 'Supprimer'), 'Fichier' (with 'Fichiers incorporés', 'Requêtes liées', and 'Fichiers de résultats'), and 'Presse-papiers' (with 'Copier', 'Coller', and 'Couper').

The left pane shows a tree view of request folders and items. The 'SYLVAIN' folder is expanded, showing items like 'coherence', 'Commande - Détail (3)', 'Copie de F0911', 'F0911', 'groupe_de_requetes', 'rapprochement', 'rapprochement2', 'rapprochement3', 'RQ PRISE EN CHARGE MARCHANDISE (2)', 'SQL', 'test (6)', 'testtoto', and 'union'. Below it, the 'Modèles de requêtes' folder is expanded, listing various report templates such as '00_Compte le Nombre de Centre de Coût', '00_Consultation Code et Description des Tables UDC', and '01_Compte le Nombre de Client'.

The right pane, titled 'Commande - Détail', provides configuration details for the selected request. It includes the source 'IDE_VIGILENS (EnterpriseOne / OneWorld) (9999 Production Environment)', a 5-minute timeout, and creation/modification timestamps. It lists tables used: 'F4901 Jaler Order Header file' and 'F4911 Jaler Order Detail file'. It defines joins between 'Société doc. (F4901)', 'R# commande (F4900)', and 'Type com. (F4901)'. It lists fields to visualize: 'Société doc. (F4901)', 'R# commande (F4900)', 'Type com. (F4901)', and 'R# ligne (F4911)'. It also shows sorting criteria for 'Société doc. (F4901)', 'Type com. (F4901)', 'R# commande (F4900)', and 'R# ligne (F4911)'. Finally, it lists ruptures for 'Société doc. (F4901)' and 'R# commande (F4900)'.
