Database

Application Setup						
Database Help Box Global Colors Set User						
Name ODBC source name ODBC driver JDE_VIGILENS < Direct Acces with OCI > (Shared)	Type Ent					
Add Import Change Delete						
OK Cancel						

This screen is the same as AdminTool, except that it has an Import button while the AdminTool has a Share button.

The Import button lets you to automatically retrieve the definition of a previously shared data source.

When you click on the Import button, a dialog box asks which data source must be imported.

Last update: 2020/09/28 en:v8_0_0:designer:menus:personnalisation:start https://vigilens.wiki/doku.wiki/doku.php?id=en:v8_0_0:designer:menus:personnalisation:start&rev=1601283468

. It is possible to import several data sources at the same time.

In order to take advantage of the specific functionalities of JDE data sources, it is imperative that the data source be imported (even if it already exists on the machine). An imported data source can be recognized by the name of the ODBC driver that appears in the list of databases. For an imported source, the driver name must be "< Direct access via OCI > (Shared)" for an Oracle type database or "Vigilens - Shared DataSource" for a connection via ODBC.

Display default icon for queries					
Do not display number of result files in query tree					
OK Cancel					

The options in this screen allow to optimize the response times for machines with access to queries with a high latency.

- Use a generic icon to display queries : Replace any specific icons associated with the queries by a generic icon to reduce response times.
- Do not display the number of result files in the query tree: Allows a faster display of the list of queries.

	The number of result files is the blue numb	er in brackets in the query panel

Color

Last update: 2020/09/28 en:v8_0_0:designer:menus:personnalisation:start https://vigilens.wiki/dokuwiki/doku.php?id=en:v8_0_0:designer:menus:personnalisation:start&rev=1601283468 10:57

Vigilens uses different colors in order to quickly identify joints and interlocking brackets. It is possible, in this screen, to modify the number of colors used, the order of the colors as well as the colors themselves.

Set User

×

Identical to the screen present in the application AdminTool, with in addition the possibility to specify, for the connected user, formats different from those defined in Vigilens (see Vigilens Settings).

Information panel

×

This is where you can customize the panel Overview.
