

Query Menu

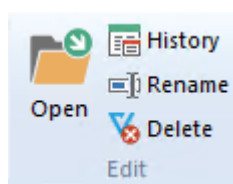

This menu appears only if a query is selected [in one of the panels](#).

Run

- Execute = executes the query using the interactive restitution mode defined at the query level.
- Print = prints the summary of the query.

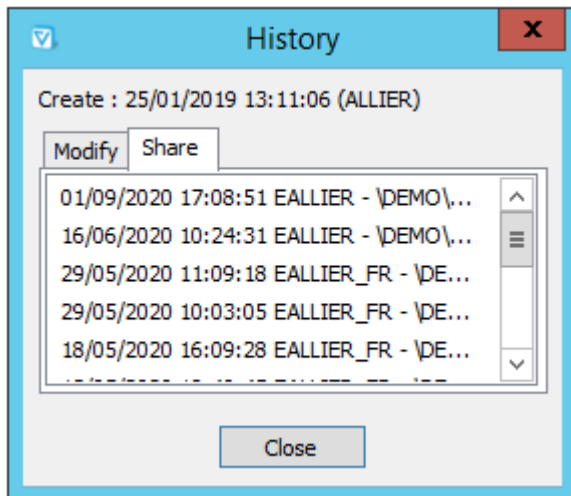

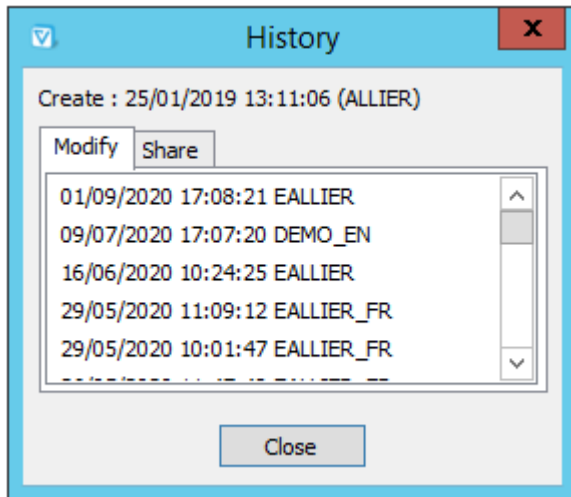

Edit

Most of these buttons are not used very much, as they have intuitive shortcuts.

- Open = open in edition the selected query = double click on the query.
- Rename = single click on a query or F2 on an already selected query.
- Delete = button Delete on the keyboard.

The History button details the modifications and publications of the selected query.

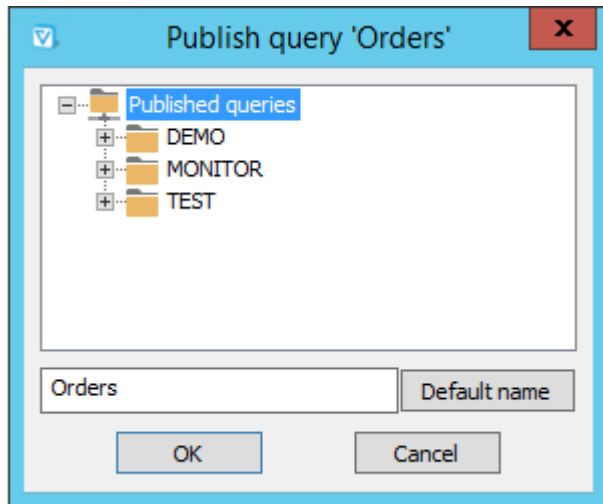

File

Publish

Once the development of a query is complete, it must be published to make it accessible to other users. A location in the shared directory is then requested, as well as a name. Overwriting a shared query is possible with a warning.

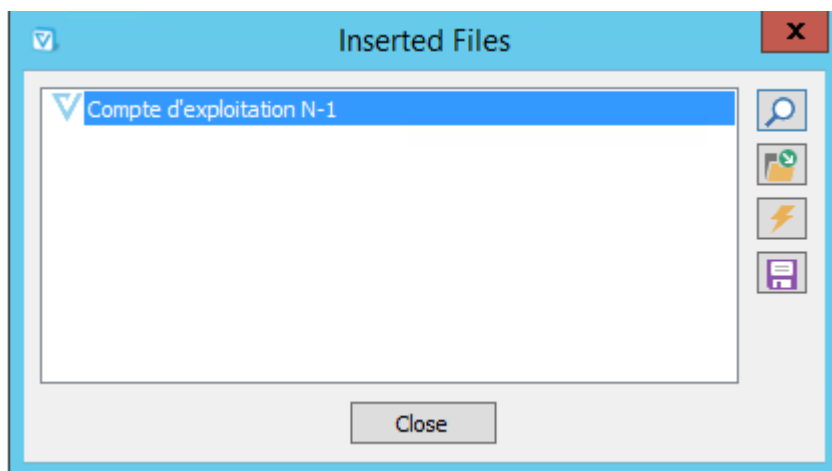

It is not necessary to publish subqueries, only the final execution request must be published (subqueries are automatically integrated into the main request).

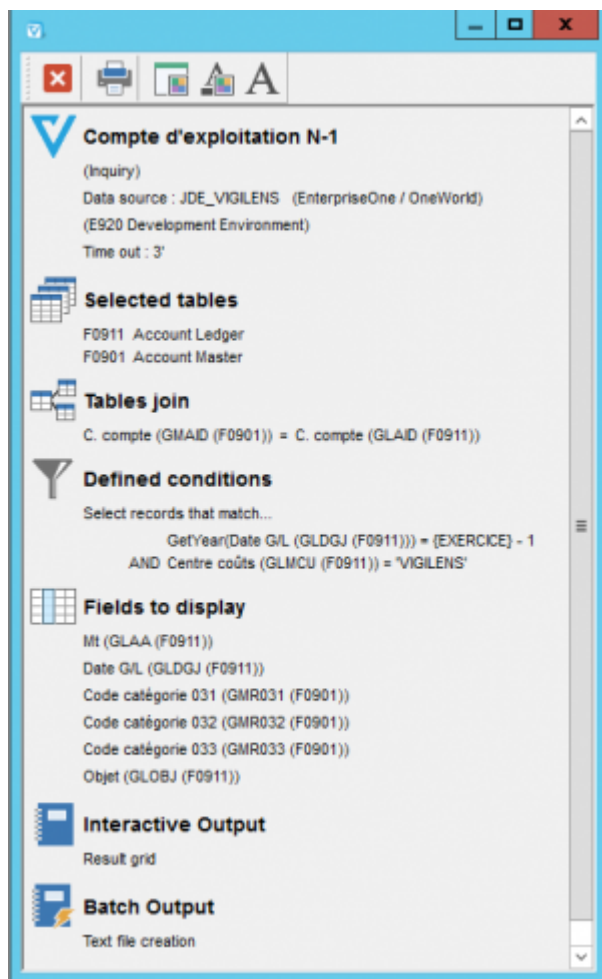

Inserted Files

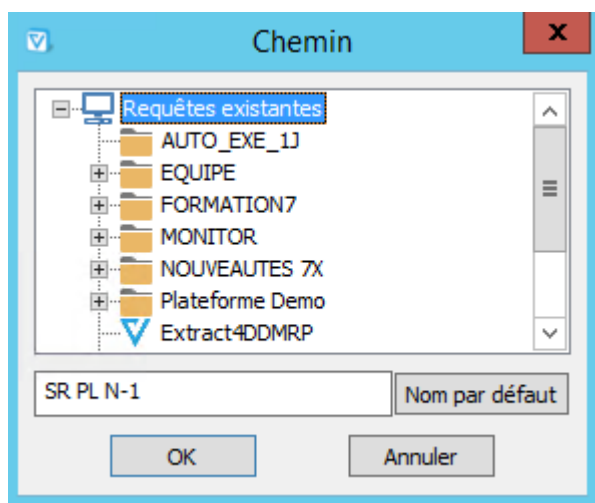

This button allows certain actions on subqueries that have been incorporated into the main query. See [Query selection](#).

-  : Displays a preview similar to the main Designer screen.

-  : allows us to directly edit the embedded query.
-  : execution of the embedded query alone.
-  : extract the embedded query.

Linked Queries

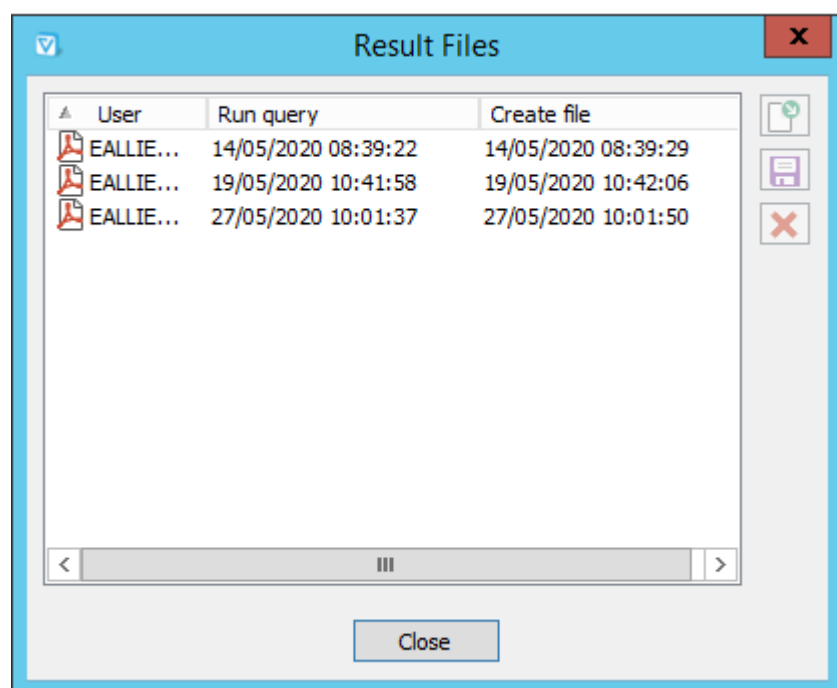

The [linked queries](#) are a powerful way to improve the user experience. See [dedicated page](#).

Result file

Result Files

Gives access to all the results files available for this query.

It is possible to:

-  : open the result file.
-  : save it on the disk.
-  : Delete it.

You can select several result files simultaneously to make a mass deletion.

You can't delete a query that has result files.

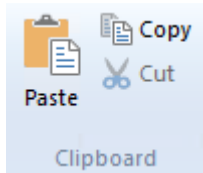

It is possible to prevent a user from deleting files that are not his or her own. See

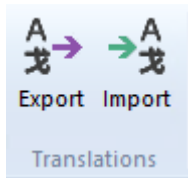

Authorizations.

Clipboard

Classic editing menu

Translation

When creating a query, all text fields followed by a button  can be associated with multiple translations.

The Export and Import menus allow respectively :

- create a csv file with all the translations existing in the selected query and the framework to add more translations.
- to integrate in the query all the descriptions in a csv file
