

LogManage

Description

Management of active connections. This tool makes it easy to view active connections and to delete them if necessary.

Connection

LogManage can be started:

- through the windows menu by explicitly searching for LogManage
- by its .exe : <Vigilens install folder>\LogManage.exe

The connection is made with a user name defined by [the AdminTool management menu](#), and this user and his group must have appropriate rights ([see Access to applications](#)).

Deleting a connection from the LogManage application will not cause any data loss if the connection is in use. Indeed, if a user is modifying a request while his connection is deleted from the LogManage application, he will be able to continue his modifications until they are saved. It is only when he tries to perform a new action (for example: creating, modifying or deleting a query) that he will be notified that his session has been deleted and that he must reconnect.
