Dashboard

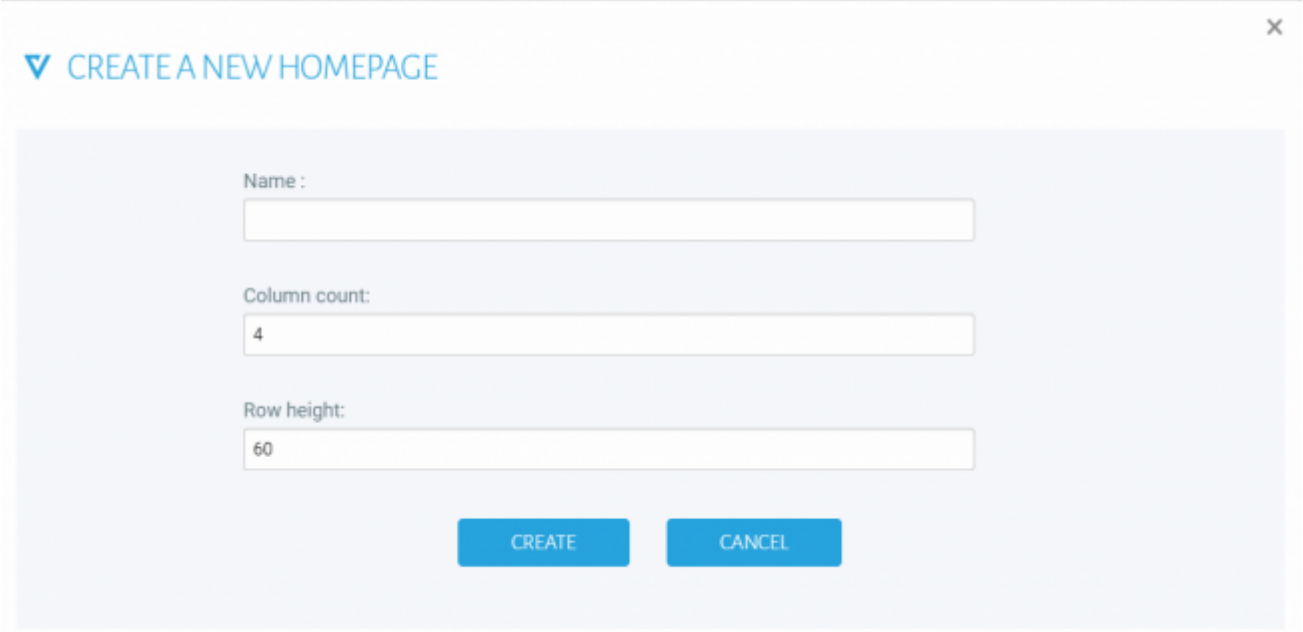
Creating a dashboard is simple and intuitive. There are two main steps:

- Creation of a new home page
- Creating a new widget

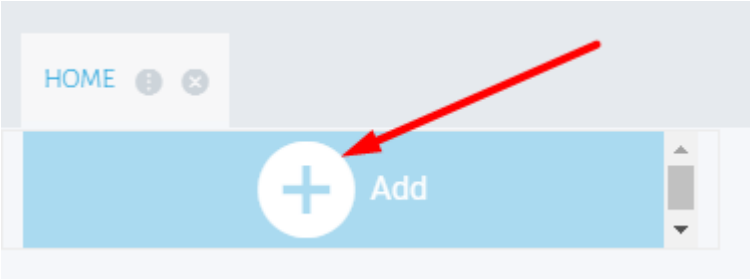
Creating a New Home Page

After activating the button `Customize my dashboard`, the user clicks on the button + at the top right of the page and fill out the form to create the new home page.
The created home pages are organized as tabs, so it is possible to create and organize several tabs as needed.

Each tab is organized as a grid; the user must decide on the name and dimensions (number of columns and rows).



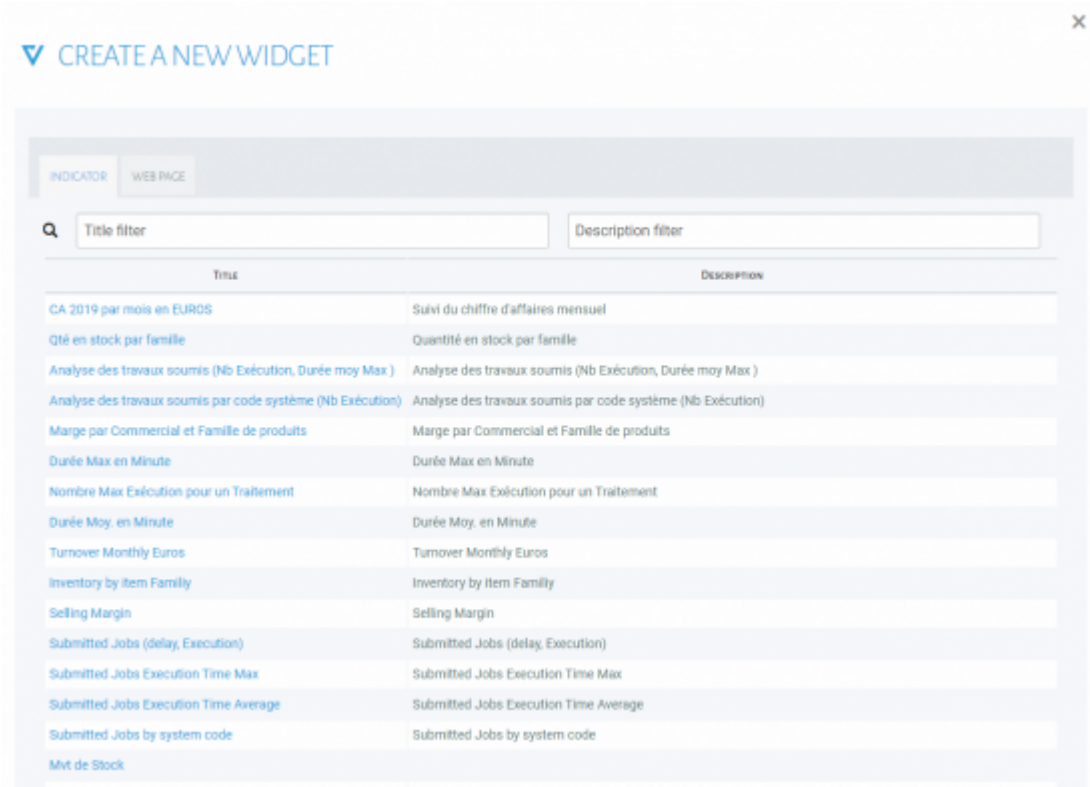
Then it is possible to add the desired widgets to the page.



Creating a New Widget

When creating the widget, the user has two choices: use a previously created indicator, or use the content of a web page.

Indicator



Web page

The user has the choice to import a web page using its URL, or (if possible) create a widget from the html code generated on a website.

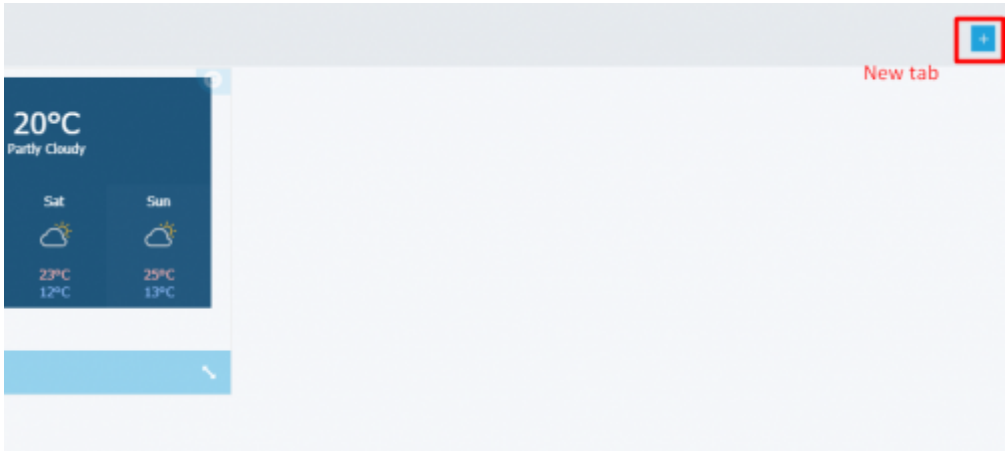
The size of indicators and widgets can be changed using the icon in the bottom right corner and their location can be adjusted using the icon on the left.

To add new indicators/widgets to the tab, the user clicks on the rectangle

. It is also possible to create new tabs by repeating the same process as above.



To save, simply click on the button `Customize my Dashboard` and select Save.
